LETS PRESERVE

Sweet Corn

Recommended Varieties
Most sweet corn varieties are acceptable for canning and freezing. Bodacious and Incredible are good extra-sweet yellow varieties. Temptation, Delectable, and Providence are good extra-sweet bicolor varieties. Silver King, Silver Princess, and Whiteout are extra-sweet white varieties.

Quantity
A bushel of ears weighs 35 pounds and yields 6 to 11 quarts of whole-kernel style or 12 to 20 pints of cream-style corn. An average of 31½ pounds (in husks) is needed for a 7-quart canner load of whole-kernel corn. An average of 20 pounds is needed for a 9-pint canner load of cream-style corn. An average of 2½ pounds makes 1 pint of frozen whole-kernel corn.

Quality
Preserve corn within 2 to 6 hours of harvest for best quality. Select ears containing kernels of ideal maturity for eating fresh. Sweeter varieties may turn brown when canned, especially if processed at 15 pounds of pressure. Can a small amount and check color and flavor before canning large amounts. White sweet corn varieties can appear a little grayish after canning and have less nutrition than yellow or bicolor varieties.

Preparation
Husk ears, remove silk, trim out insect-damaged kernels, if needed, trim off ends of ears to remove small fibrous kernels, and wash ears.

To Prepare Whole-Kernel Corn
For freezing or canning, place ears in 1 gallon of boiling water and blanch for 3 minutes after the water returns to a boil. Cool ears and cut kernels from cob at about three-fourths of the depth of kernel. Do not scrape the cob.

To Prepare Cream-Style Corn
For freezing or canning, blanch ears for 4 minutes in boiling water. Cool ears and cut kernels from cob at about one-half of their depth. Scrape the cob with a knife to remove the remainder of the kernels and combine with half-kernels.

To Prepare Corn-on-the-Cob
For freezing, blanch small ears for 7 minutes in boiling water; blanch medium-sized ears for 9 minutes; and blanch large ears for 11 minutes. Cool in several changes of cold water and drain. If desired, cut ears into uniform 4-, 6-, or 8-inch pieces.

Freezing Procedure
Don’t freeze more than 2 pounds of food per cubic foot of freezer capacity per day. To package whole-kernel or cream-style corn, fill pint or quart plastic freezer containers, tapered freezer jars, or zip-type freezer bags. Squeeze air from plastic bags, seal, and label. If using rigid freezer containers, allow ½ inch of headspace for whole-kernel corn and 1 inch of headspace for quarts of cream-style corn. To package corn-on-the-cob, fill into quart or half-gallon freezer bags. Squeeze out air, seal, label, and freeze.

CAUTION: This product cannot be safely canned in a boiling water bath. Corn must be processed in a pressure canner.
Canning Procedure
Corn must be processed in a pressure canner. Wash jars. Prepare lids according to manufacturer’s instructions. Whole-kernel corn may be canned in pints or quarts. Cream-style corn must be packed in half-pint or pint jars only. If desired, add 1 teaspoon of salt per quart, ½ teaspoon per pint, or ¼ teaspoon per half-pint jar. For raw-packed, whole-kernel-style corn, fill jars with cut product, leaving 1 inch of headspace. Add boiling water over the corn in each jar, leaving 1 inch of headspace. Remove air bubbles. Wipe sealing surface of jars with a clean, damp paper towel, add lids, tighten screw bands, and process. For hot packs, add 1 cup of hot water for each quart of whole-kernel corn or 1 cup of hot water for each pint of cream-style corn, and heat to a boil. Fill jars with hot corn and cooking liquid, leaving 1 inch of headspace. Remove air bubbles. Wipe the sealing surface of the jars with a clean, damp paper towel, add lids, tighten screw bands, and process.

To Process in a Pressure Canner
Place jar rack, 2 to 3 inches of water, and sealed jars in canner. Fasten lid and heat canner on high setting. After exhausting steam for 10 minutes, add weighted gauge or close petcock to pressurize the canner. Start timing the recommended process when the desired pressure is reached. Regulate heat to maintain a uniform pressure. When processing is complete, remove canner from heat. Air-cool canner until it is fully depressurized. Then slowly remove weighted gauge or open petcock, wait 10 more minutes, and unfasten and carefully remove canner lid. After processing is complete, remove jars from canner with a jar lifter and place on a towel or rack. Do not retighten screw bands. Air-cool jars for 12 to 24 hours. Remove screw bands and check lid seals. If the center of the lid is indented, wash, dry, label, and store jar in a clean, cool, dark place. If lid is unsealed, examine and replace jar if defective, use new lid, and reprocess as before. Wash bands and store separately. Canned sweet corn is best if consumed within a year and is safe as long as lids remain vacuum sealed.
