Cornell Cooperative Extension Presents:

Producing the Quality Beef Your Customers Seek

Mike Baker, Extension Beef Specialist

Chris Wilson, Wilson Beef Farms

November 4th, 2013

Registration at 5:30 pm, Dinner at 6 pm with program to follow

The last three bulls you used account for 75% of the genetic makeup of your cow herd. Good bulls are not cheap and bad bulls cost you money with every poor calf weaned out of an underperforming cow. You really can't afford to make a mistake in selecting a bull. The Expected Progeny Differences (EPD) is the accurate tool a farmer can use to reduce the risk of making the wrong decision in purchasing a bull.

This program will provide the basics to understanding EPDs, which EPDs are relevant to your farm, and how to use them to reach your marketing objectives. We will end the session with an exercise in which you will choose the right bull for a given set of herd conditions. This is the first of a series of educational meetings covering factors that influencing profitability culminating with a Hoof to Rail program in March 2014.

Location - Anastassia Events: 6440 Pike Street, Portageville, NY 14536

Registration is required by October 29th.

Cost for the workshop is \$15/person, includes dinner.
