

Mechanically Harvested Forage NDF Goals

Cornell University
Cooperative Extension
of Delaware County

Grasses	47 - 55% of DM (Crude protein 16-19% of DM)
MMG (70% Grass)	42 – 50% of DM
MML (70% Legume)	40 – 45% of DM
Legumes	38 - 42% of DM
Corn Silage	38 - 44% of DM*

* - Grain content of the corn has a large influence on NDF content; Higher NDF levels can indicate grain immaturity; BMR hybrids can have higher NDF content
