

Swiss Chard and Black Eyed Peas

- 1 pound fresh swiss chard or other greens such as baby kale, collards, or mustard greens (10 cups loosely packed)
- 1 Tablespoon olive oil
- 1 large onion, quartered and thinly sliced
- 1 16-ounce can black-eyed peas, drained and rinsed (or favorite canned or dried bean, cooked)
- 2 Tablespoons balsamic vinegar or apple cider vinegar (or to taste)
- Black pepper, to taste

Wash Swiss chard in cold water and pat dry. Discard tough stems. Trim away thick mid-ribs from the leaves. Discard ribs or slice thinly and use. Chop the leaves into large pieces.

Heat the oil in a pot or large stir-fry pan. Add onion and sauté over medium heat until golden. Add Swiss chard, cover, and steam until tender. If using kale or collards, add 1/4 to 1/2 cup water to keep mixture moist. Allow 3 to 5 minutes to steam Swiss chard; 10 to 15 minutes to steam the other types of greens.

Stir in the black-eyed peas and vinegar. Cook until everything is just heated through. Season to taste with pepper and serve.

Yield: 8 servings; serving size 1/2 cup (80 calories, 2 grams fat, 0 mg cholesterol, 3 grams fiber, 300 mg sodium)

Swiss Chard and Lentils

- 1 cup uncooked, rinsed lentils
- 1/2 cup uncooked brown rice
- 3 cups sliced carrots
- 2 pounds Swiss chard, cleaned and chopped (approximately 20 cups torn leaves loosely packed or 4 cups sliced ribs and stems)
- 3 cups water
- 1 packet onion soup mix, reduced sodium
- 1 teaspoon basil
- 1 Tablespoon olive oil

Place all ingredients in large pot. Bring to a boil. Reduce heat, cover and cook until rice is tender (about 20 to 30 minutes).

Yield: 20 servings; serving size 1/2 cup (80 calories, 1 gram fat, 0 mg cholesterol, 4 grams fiber, 180 mg sodium)

(June 2013)

Swiss Chard

PLANT * GROW

- * Swiss chard prefers cool weather but lasts through the summer without going to seed or bolting.
- * Chard prefers full sun early in the season and shade in summer when it is warm.
- * Chard tolerates moderate frost, but do not plant in very early spring. Some varieties will bolt when exposed to early frost.
- * Swiss chard also makes beautiful edible ornamental plants.
- * Plant seeds outside 2-4 weeks before the last expected frost.
- * Start seeds indoors for earlier crops or if you want to arrange chard by color in the garden.
- * Like beets, chard seeds produce more than one plant so will need thinning. Thin to 6-12-inch spacings.
- * Mulch plants to retain moisture and suppress weeds.
- * You can begin harvesting when leaves reach usable size.
- * To harvest, remove a leaf or two from each plant leaving the center leaves intact. As the plant grows you can continue to harvest the large outer leaves. Use garden shears or a knife to harvest leaves from the plant.
- * As plants age, older leaves get tough. Cut plants back to about 3-5 inches tall to encourage a flush of new, tender growth.

ENJOY YOUR CHARD

- * Despite what the name may indicate, Swiss chard is not native to Switzerland. Its name comes from a Swiss botanist who first named the plant in the 19th century.
- * Swiss chard is also known as stem chard, spinach beet, or leaf beet.
- * Chard is a good substitute for spinach in most recipes, including quiche.
- * Swiss chard is naturally fat free, cholesterol free, a good source of magnesium, and an excellent source vitamins A and C.
- * Try ravioli filled with Swiss chard, part-skim ricotta, and a touch of parmesan cheese. Finish with your favorite sauce.
- * Try Swiss chard in scrambled eggs or omelets.
- * Swiss chard makes a scrumptious addition to any soup.
- * Layer chard in your lasagna or toss with pasta in a light olive oil and lemon sauce.
- * Swiss chard makes a delicious pizza topping. Also chop and add it to your pizza marinara sauce.
- * Steam the stalks of Swiss chard and eat them as you would asparagus.
- * Add Swiss chard to stir fry for a healthy "kick."

PRESERVE

Store unwashed leaves in plastic bags in the crisper in the refrigerator for 2 to 3 days.

Freezing: Wash thoroughly and chop stems. Water blanch 2 minutes. Cool, drain, package and freeze leaving 1/2-inch headspace.

RECYCLE * COMPOST

- * Disease free chard scraps provide a rich nitrogen source, nutrients and moisture to your compost.
- * Vegetable scraps are the "green" additions to your compost.

PURCHASE

- * Chard is a stalk that you might find in white, red, or yellow varieties, and it has wide fanning green leaves. Both the leaves and stalks are edible and are available from June-October at farmers' markets.
- * Select chard with fresh green leaves; avoid those that are yellow or discolored.
