

Storyboard Devonte Parker Increasing Digital Literacy Early

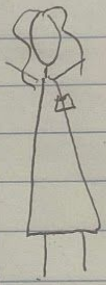

Much kids do not have the digital literacy they should have. Lacking PPT skills & other tools

They're forced to take tests and write papers which gives them zero room for creativity

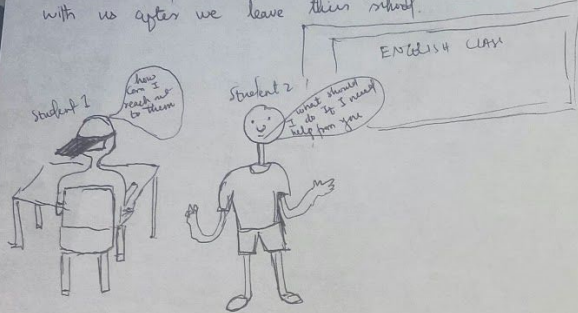

Don't fret, I'll teach you

Billy Presenting...

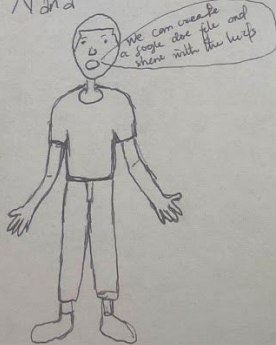

Problem: Students have no means of communicating with us after we leave their school.

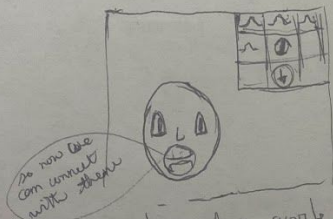

We can come up with multiple methods for connecting with the students. Examples could be phone contact, email, etc.

Nana

Google Docs
Each student can share their work
And we can have checkpoints

The most practical way would be to create a google doc and a google sheet with the students so we can see the progress of their work.

We can now have regular access to the kids work. We can have regular checkpoints. And this project would have a high success probability.

Increasing Digital
