Avoid the Predators!

There are lots of mammals in upstate New York, and they all have unique ways of avoiding predators. Some of these ways include using **camouflage**, **defense**, **escape**, or **venom**. We’ve seen some examples in class, so now see if you can show them here! **Write the mammal’s name** on the line beneath the picture using the word bank, and **draw a picture** of it avoiding a predator in the box. Then, **draw a line** from the mammal to its way of avoiding prey. The animals can have more than one way of avoiding prey!
